

PATIENT: MUSTANSIR

AGE: 18 Years

CHIEF COMPLAINT & SYMPTOMS

body pain , fever (Duration: 4 days | Severity: Moderate)

DETAILED CLINICAL SUMMARY

The common cold is typically caused by rhinoviruses, coronaviruses, or adenoviruses, which invade the epithelial cells of the upper respiratory tract. The body's immune response to these pathogens results in inflammation, leading to symptoms such as nasal congestion, sore throat, cough, and systemic symptoms like fever and malaise. Triggers can include exposure to infected individuals, seasonal changes, and environmental factors. The natural progression of a common cold usually spans 7 to 10 days, with symptoms peaking around days 2 to 3. Management is primarily symptomatic, focusing on rest, hydration, and over-the-counter medications to alleviate discomfort. Antibiotics are not indicated unless a secondary bacterial infection occurs.

Rx RECOMMENDED PHARMACOTHERAPY

Medication Name	Dosage	Frequency	Duration
Paracetamol 500mg	1 tablet	Every 6 hours as needed for fever and body pain	5 days
Diphenhydramine 25mg	1 tablet	Every 8 hours as needed for symptomatic relief of cold symptoms	5 days

ADVICE & LIFESTYLE MODIFICATIONS

- Stay hydrated by drinking warm fluids such as herbal teas or broths, which can soothe the throat and help thin mucus, aiding in recovery.

- Inhale steam from a bowl of hot water to moisten the airways.

HABITS TO CHANGE / PREVENTIVE ADVICE

- Increase physical activity to at least 30 minutes a day, 5 times a week, to enhance immune function and overall health, reducing the frequency of infections.

- Implement good hand hygiene practices to help prevent infections.

POSSIBLE ALLERGIES / INTERACTIONS TO WATCH

- The patient has known allergies to dust, pollen, and milk. It is crucial to avoid exposure to these allergens, especially during respiratory infections, as they can exacerbate symptoms and prolong recovery.
