

PATIENT: MUSTANSIR

AGE: 18 Years

CHIEF COMPLAINT & SYMPTOMS

headache (Duration: 1 days | Severity: Moderate)

DETAILED CLINICAL SUMMARY

Cervicogenic headache is characterized by pain that originates in the cervical spine and is referred to the head. The pathophysiology involves irritation or inflammation of the cervical structures, which can stimulate the trigeminocervical nucleus, leading to referred pain. Triggers may include poor posture, cervical strain, or degenerative changes in the cervical spine. The natural progression can vary, with some patients experiencing episodic headaches while others may develop chronic symptoms. Management typically includes physical therapy, pain relief medications, and addressing any underlying cervical spine issues.

Rx RECOMMENDED PHARMACOTHERAPY

Medication Name	Dosage	Frequency	Duration
Ibuprofen 400mg	1 tablet	Every 6-8 hours as needed for pain	5 days

ADVICE & LIFESTYLE MODIFICATIONS

- Apply a warm compress to the neck: This can help relax tense muscles and improve blood flow, potentially alleviating headache symptoms.

- Practice
which may

HABITS TO CHANGE / PREVENTIVE ADVICE

- Increase physical activity: Engaging in regular exercise can improve overall musculoskeletal health and reduce the frequency of headaches.

- Adopt e
strain and

POSSIBLE ALLERGIES / INTERACTIONS TO WATCH

- The patient has allergies to dust, pollen, and milk, which may exacerbate respiratory symptoms and should be considered when managing any upper respiratory infections.
