

PATIENT: MUSTANSIR

AGE: 18 Years

CHIEF COMPLAINT & SYMPTOMS

headachd (Duration: 2 days | Severity: Moderate)

DETAILED CLINICAL SUMMARY

Cervicogenic headache arises from the cervical spine and is often associated with neck pain or stiffness. The pathophysiology involves irritation or inflammation of the cervical structures, which can lead to referred pain in the head. Common triggers include poor posture, cervical strain, or trauma. The natural progression may involve episodic headaches that can become chronic if the underlying cervical issues are not addressed. Management typically includes physical therapy, pain relief medications, and addressing any ergonomic issues. In some cases, nerve blocks or surgical interventions may be considered if conservative measures fail.

Rx RECOMMENDED PHARMACOTHERAPY

Medication Name	Dosage	Frequency	Duration
Ibuprofen 400mg	1 tablet	Every 6-8 hours as needed for pain	5 days

ADVICE & LIFESTYLE MODIFICATIONS

- Apply a warm compress to the neck: This can help relax tense muscles and improve blood flow, potentially alleviating headache symptoms.

- Stay hydrated
following r

HABITS TO CHANGE / PREVENTIVE ADVICE

- Incorporate regular physical activity: Engaging in moderate exercise can improve overall physical health and reduce the frequency of headaches by relieving tension and improving posture.

- Practice
neck strain

POSSIBLE ALLERGIES / INTERACTIONS TO WATCH

- Mustansir has known allergies to dust, pollen, and milk. It is important to monitor for any allergic reactions to medications prescribed, particularly if they contain lactose or other allergens.
